Metric Architectural Construction Drafting and Design Fundamentals-William J. Hornung 1981

Architects' Data-Ernst Neufert 1991-01-15 This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The

illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

The Architecture Concept Book-James Tait 2018 Inspired by the complexity and heterogeneity of the world around us, and by the rise of new technologies and their associated behaviors, The Architecture Concept Book seeks to stimulate young architects and students to think outside of what is often a rather conservative and self-perpetuating professional domain and to be influenced by everything around them.Organized thematically, the book explores thirty- five architectural concepts, which cover wide- ranging topics not always typically included in the study of architecture. James Tait traces the connections between concepts such as familiarity, control, and memory and basic architectural components such as the entrance, arch, columns, and services, to social phenomena such as gathering and reveling, before concluding with texts on shelter, relaxing, and working. Even in this digital age, Tait insists that "we must always think before we design. We must always have a reason to build."Each theme is accompanied by photographs, plans, and illustrations specially drawn by the author to explain spatial ideas, from the small scale to the urban.
